## Overview

---

Are battery energy storage systems subject to environmental permitting?

DEFRA is planning to bring battery energy storage systems (BESS) into the environmental permitting regime. However, some operators may be unaware that they may be subject to it already, putting themselves in potential legal jeopardy.

What are the safety requirements for electrical energy storage systems?

Electrical energy storage (EES) systems - Part 5-3. Safety requirements for electrochemical based EES systems considering initially non-anticipated modifications, partial replacement, changing application, relocation and loading reused battery.

What is the health and safety guidance for grid scale electricity storage?

This health and safety guidance for grid scale electricity storage, including batteries, aims to improve the navigability and understanding of existing standards. The deployment of grid scale electricity storage is expected to increase.

Why are we legislating electricity storage?

Why are we legislating?

Electricity storage covers a range of technologies that store low carbon energy for when it is needed, for example in batteries on the wall of your home or business, or in facilities that pump water to higher reservoirs when electricity is abundant, and let it flow back down through a turbine when it is scarce.

What are the international standards for battery energy storage systems?

Appendix 1 includes a summary of applicable international standards for domestic battery energy storage systems (BESSs). When a standard exists as

a British standard (BS) based on a European (EN or HD) standard, the BS version is referenced. The standards are divided into the following categories:  
Safety standards for electrical installations.

What are the standards for battery energy storage systems (BESS)?

As the industry for battery energy storage systems (BESS) has grown, a broad range of H&S related standards have been developed. There are national and international standards, those adopted by the British Standards Institution (BSI) or published by International Electrotechnical Commission (IEC), CENELEC, ISO, etc.
