

# How to apply glass glue to the seams of photovoltaic panels

## Overview

---

How to seal between solar panels using a silicone sealant?

Below is a step-by-step procedure of how to seal between solar panels using a silicone sealant: Clean the surface to get rid of tape or any other material before starting the sealing process. Add the silicone sealant at the point where the glass meets with the frame or whichever edge protection is present.

How do you seal a solar panel?

Make sure the surface is clean and free of any tape or other materials before applying silicone sealant to seal solar panels. Add some silicone at the corner of the glass where it meets with the frame or any other added edge protection. Make sure that you do not apply too much silicon since it will overflow after installing the panel back.

Can you use silicone adhesive on solar panels?

Most hardware stores carry an industrial-grade silicone adhesive that works great at filling gaps around frames or seams of different types of windows, which also applies to most flat surfaces of commercial-grade solar cells.

Can structural adhesives help lower PV panels' costs?

Ian Quarmby from Lord Corp. explains how using a structural adhesive offers can help improve quality (and lower costs) for PV panels, and eliminate maintenance issues for installers — and in both cases, help lower costs.

What are the benefits of structural adhesives for solar panels?

Another concern for solar panel installers is the weight of the system. Structural adhesives eliminate the weight of mechanical fasteners and improve stress distribution, while providing a clean, streamlined appearance.

How do you seal glass panels?

Add the silicone sealant at the point where the glass meets with the frame or whichever edge protection is present. Avoid applying too much sealant as it just goes to waste, flowing out after you install the panels back. Carefully add more silicone between the panels, if necessary, especially where you need to fill in the gaps.
