

How to install photovoltaic brackets and photovoltaic panels

Overview

How do you install a solar panel bracket?

The end brackets will have a spot to hold a single panel, and the middle brackets will have a spot to secure two panels. Some solar panel kits may use single panel brackets. The basic is to position the bracket to capture the panel and then tighten the bolt that clamps the bracket to the panel.

How to install a solar panel?

The first step is to attach the fixing bracket to the solar panel. Lay the solar panel face-down on the tarp or canvas to protect the photovoltaic surface. You want to be sure the mounting holes on the back of the panel align with the holes in the fixing bracket. Don't modify the module frame because doing so may void your manufacturer's warranty.

How do solar panels attach to a roof?

Installers fix solar panels to a roof by lifting up some roof tiles and attaching mounting brackets to the rafters, before carefully placing the tiles back where they were. They'll then attach rails to these brackets, before locking solar panels into the rails.

How do solar panel brackets work?

Solar panel brackets are just a nut and bolt attachment. They come in a variety of styles, and each is slightly different. Many slide onto the solar frame railings and then tighten to hold the panel in place. The end brackets will have a spot to hold a single panel, and the middle brackets will have a spot to secure two panels.
