

# How to make 3D animation of photovoltaic bracket

## Overview

---

How do I use solar animations?

The animation can be set to rotate the sun about the model, or the model can rotate about the layer plane center or heliodon object. Solar animations can be interactive, observing the effects in the drawing as changes are made. To interactively view changes as you move the sliders, render in Wireframe or OpenGL render mode.

What is a solar animation?

A solar animation illustrates the way the sun moves over, or shadows are cast upon, a project as the sun's position changes. It studies how the sun affects a model or site at a particular time of day or year. The animation can be set to rotate the sun about the model, or the model can rotate about the layer plane center or heliodon object.

Can solar animations be interactive?

Solar animations can be interactive, observing the effects in the drawing as changes are made. To interactively view changes as you move the sliders, render in Wireframe or OpenGL render mode. The solar animation can also be exported to a .mov file.

How do PV modules work in 3D visualization?

The PV modules are placed automatically on roofs. With the use of the mouse, objects that cause shading can be placed and shifted to any position within or outside the PV array. Chimneys, roof dormers, trees and houses are stored as standard objects in a library. In 3D Visualization, it is not possible to calculate more than 2000 modules.

How do I create a cable plan for a PV system?

A completed PV system must be present in order to create a cable plan. That means that the PV modules must be connected to an inverter. cable (black).

Display/do not display string cable, DC trunk cable and DC main cable (red/blue). Hold down the middle mouse button to shift the view.

How a star shape is formed in a PV module?

A star shape will be formed. As a rule, the option Cable every other PV module will result in savings for cable lengths. By means of the option Right-angled cable path, the order of the cabling is determined with the goal of achieving the shortest cable length to the target node.
