

# How to match photovoltaic inverter with battery

## Overview

---

If you're using a battery, connect the inverter to the battery terminals. If you're connecting to the grid, connect the inverter to the electrical panel using a dedicated circuit breaker.

**Compatibility:** Ensure your battery is compatible with your inverter and solar system to avoid integration issues. Inverters convert the direct current (DC) produced by solar panels into alternating current (AC), which powers your home. Important aspects include: Type: Choose between string inverters, microinverters, or hybrid inverters.

How do you connect a solar inverter to a battery?

After connecting the solar panels to the inverter, you need to connect the inverter to the battery or grid. If you're using a battery, connect the inverter to the battery terminals. If you're connecting to the grid, connect the inverter to the electrical panel using a dedicated circuit breaker.

Do solar panels need an inverter?

However, to truly harness the potential of solar energy, connecting the solar panels to an inverter is essential. The inverter serves as the heart of the solar power system, converting the direct current (DC) electricity produced by the solar panels into alternating current (AC) electricity, which is suitable for powering homes and businesses.

Are hybrid inverters a good choice for solar power?

With this in mind, hybrid inverters are your best choice as they can act as an energy converter for both solar panels and batteries. By the way, no solar power system is complete without a battery. Click the following link to learn more about how solar batteries work or this post on the best solar battery on the Australian market.

Why do you need a solar PV inverter?

A solar PV inverter also plays an important role in providing communication, not just between the equipment of your solar + battery system but also for owners. They help you track your system's electrical generation so you can streamline and maximise your system's power output.

What are the different types of solar power inverters?

There are four main types of solar power inverters: Also known as a central inverter. Smaller solar arrays may use a standard string inverter. When they do, a string of solar panels forms a circuit where DC energy flows from each panel into a wiring harness that connects them all to a single inverter.
