

How to match photovoltaic panels with electrical equipment

 **TAX FREE**    

Overview

One option is to connect the photovoltaic system to the main low-voltage switchboard of the electrical installation. If the conversion of the power produced by the solar panels is done by more than one photovoltaic inverter, it is recommended that the output of those inverters be grouped by.

Connecting PV generators to the closest secondary low-voltage switchboard is an architecture used mainly in existing buildings where the PV production is much lower than the building consumption. This approach is used primarily.

Connecting the PV system upstream from the main low-voltage switchboard is frequently the approach taken in existing buildings when the PV.

To simplify the integration of a photovoltaic system and/or other distributed energy resources, consider Schneider Electric's Energy Control Center- an intelligent, pre-engineered, and configurable power control center designed to.
