

# How to open the energy storage box

## Overview

---

Pneumousia Storage Boxes are locked boxes that can only be opened when hit by their opposing Pneumousia energy. How do you store energy?

You can store electricity in electrical batteries, or convert it into heat and stored in a heat battery. You can also store heat in thermal storage, such as a hot water cylinder. Energy storage can be useful if you already generate your own renewable energy, as it lets you use more of your low carbon energy.

How does energy storage work?

The so-called battery “charges” when power is used to pump water from a lower reservoir to a higher reservoir. The energy storage system “discharges” power when water, pulled by gravity, is released back to the lower-elevation reservoir and passes through a turbine along the way.

Could a 10 hour energy storage system help stabilize power supplies?

Researchers are working on improving energy technologies to allow for electric energy storage systems to supply power for 10 hours or more, which could further stabilize power supplies as more renewable energy sources come online.

Can energy storage help stabilize energy flow?

Energy storage projects can help stabilize power flow by providing energy at times when renewable energy sources aren’t generating electricity—at night, for instance, for solar energy installations with photovoltaic cells, or during calm days when wind turbines don’t spin. How long can electric energy storage systems supply electricity?

.

What are the benefits of energy storage systems for electric grids?

The benefits of energy storage systems for electric grids include the capability

to compensate for fluctuating energy supplies: EES systems can hold excess electricity when it's available and then contribute electricity supply at times when primary energy sources aren't contributing enough, especially during periods of peak demand.

What is a battery energy storage system?

While consumers often think of batteries as small cylinders that power their devices, large-scale battery storage installations known as battery energy storage systems (BESS) can rival some pumped hydro storage facilities in power capacity.
