

# How to read the blueprint of roof photovoltaic panels

## Overview

How do I design a rooftop solar system?

Make sure your rooftop solar system design will meet your needs. You can tailor the design of your rooftop solar system to meet your needs. The system design will depend on: local regulations. Designing the right solar system for your needs should be a partnership with your solar retailer or accredited installer.

What is a solar panel layout drawing?

Here's a rundown of many of the terms you may encounter. Also known as a solar array layout or solar PV layout, a solar panel layout drawing is a key component of a solar plan set. It provides a visual representation of how the panels will be arranged and installed on a specific site.

Can solar panels be used for roofing?

The following white paper provides recommendations on the structural design of roofing systems when considering solar panels. Solar power is produced by converting sunlight into electricity. The two major methods of converting sunlight into electricity are photovoltaics (PV) and concentrated solar power (CSP).

What are the characteristics of a solar roof?

There are several roof characteristics that effect how much your solar panels will produce. Here is the top six: Also known as azimuth, orientation is the direction your roof faces. For North American solar systems, the best roof design for solar panels is one with a large, unshaded south face (an azimuth of 180 degrees).

How do roof mounted PV solar panels work?

Roof mounted PV Solar Panels are typically supported by racking systems which come in two basic forms. The first is a mechanically fastened system

and the second, the more common of the two, is a ballast restrained system. The mechanically fastened system penetrates through the roofing membrane and can be used in pitched roofs and flat roofs.

How much does a flat roof solar system weigh?

A fully-installed system with 12 solar panels usually weighs 240kg, which the average roof can easily support – but with ballasts, this figure increases to 1,200kg. This is why most flat-roof solar arrays are installed on large commercial buildings with strong roofs.
