

How to use solar panel batteries

Overview

Can you use a battery with a solar panel?

It's always better to use a battery with solar panels though, as you can save hundreds of pounds, cut your carbon footprint, and lessen the impact of electricity price rises. For more information, check out our guide to home battery storage without solar in the UK. Can you add a solar battery to an existing solar panel system?

.

Do solar panels need a battery bank?

The higher your battery's capacity, the more solar energy it can store. In order to use batteries as part of your solar installation, you need solar panels, a charge controller, and an inverter. Properly sizing your battery bank is a crucial step to creating an efficient and powerful system.

How does a solar panel battery work?

At its core, a solar panel battery works in a three-step process to generate, store, and then utilise power for a home. While the basics of taking energy and storing it for later use are the same for all kinds of units, the exact nature of battery storage technology will vary depending on the type of coupled storage inverter being used.

How do you use a solar battery?

There are three main ways to use a solar battery: Critical backup mode, self-consumption mode, and a mix of both. The way you use your battery dictates the way it works. For example, a battery used strictly for backup power works differently than a battery used strictly for solar self-consumption.

Why should you buy a solar battery?

You'll be able to use more of the electricity you generate. This should reduce

your energy bills – and your carbon footprint. For example, if you're not at home during the day to use the energy your solar panels are generating, having a battery will enable you to store (and later use) energy from your solar panels.

Should you use home batteries to store solar energy?

If you have solar PV panels, or are planning to install them, then using home batteries to store electricity you've generated will help you to maximise the amount of renewable energy you use. Storing your solar energy will reduce how much electricity you use from the grid, and cut your energy bills.
