

# **Hue Phase II Wind Power Project Power Generation**

## Overview

---

The TPC offshore wind farm phase II is being developed in an area of 50.13km<sup>2</sup> in Zone 26 of the Taiwan Strait, off the coast of Lugang Town, Changhua County. The water depth at the site ranges between 37m and 49m.

The wind project will be installed with 31 V174-9.5 MW turbines from Vestas, which have a power generating capacity of 9.5MW each. The project.

Each V174-9.5 MW turbine has the capacity to supply power to 9,000 UK households. They have a rotor diameter of 174m, swept area of 23,779m<sup>2</sup> (255,955ft<sup>2</sup>), and three 85m blades, weighing 35t each. Pre.

Denmark-based wind turbine manufacturer Vestas received a contract to supply the 31 wind turbines for the project in March 2022. The contract also includes a 14-year service agreement for the turbines. Risk management and.

Power generated from the turbines will be transmitted to the offshore substation through the 66kV inter-array cables. The substation will step up the output voltage to 161kV. The export.

What is TPC offshore wind farm Phase 2?

The TPC offshore wind farm phase II is being developed in an area of 50.13km<sup>2</sup> in Zone 26 of the Taiwan Strait, off the coast of Lugang Town, Changhua County. The water depth at the site ranges between 37m and 49m. The wind project will be installed with 31 V174-9.5 MW turbines from Vestas, which have a power generating capacity of 9.5MW each.

What is a PV-wind hybrid system?

A number of models are available in the literature of PV-wind combination as a PV hybrid system, wind hybrid system, and PV-wind hybrid system, which are employed to satisfy the load demand. Once the power resources (solar and wind flow energy) are sufficient excess generated power is fed to the battery until it is fully charged.

When will a Taiwanese wind farm be built?

First power from the Taiwanese wind farm is expected to be achieved in 2025. The TPC offshore wind farm phase II is being developed in an area of 50.13km<sup>2</sup> in Zone 26 of the Taiwan Strait, off the coast of Lugang Town, Changhua County. The water depth at the site ranges between 37m and 49m.

Can multiphase generators meet emerging requirements of wind power generation?

The multiphase generators could meet emerging requirements of the modern wind power generation. Different types of the multiphase converter topologies in wind power conversion are presented. Various kinds of modeling and control methods of the multiphase wind power generation are reviewed.

Why should a multiphase wind turbine be modularized?

When voltage sags occur in the power grid, the advantages of modularization brought by the multiphase wind turbine allows the reduction of the generator-side converter modules to fit with the decreased grid-side voltage level.

Is a multiphase wind turbine suitable for low-voltage devices?

It is pointed out that, with equal phase voltage, the phase current of PM wind turbine winding decreases gradually as the number of phases increases, which makes the multiphase PM wind turbine more suitable for the use of low-voltage devices to achieve high-power output.

## Hue Phase II Wind Power Project Power Generation
