Overview

Is energy storage a business case for South Africa?

This may have greater relevance in competitive markets, but could already have relevance in South Africa's reserve market (J.M.K.C. Donev et al. 2020). The potential for multiple services and revenue streams improves the business case for energy storage investment and development.

Is energy storage a viable option for South Africa's power system?

In the longer term, however, at higher levels of variable generation, flexibility requirements will significantly increase demanding interventions to ensure secure and cost-efficient operation of the South African power system. Energy storage was specifically noted to be highly suitable for this purpose.

Does South Africa have a battery storage system?

Matzner notes that South Africa has already made some progress in the deployment of battery storage systems, which can typically provide up to four to five hours of energy storage.

What are the barriers to energy storage in South Africa?

The report noted the main barriers in the region to be lack of regulation supporting the energy storage market, access to affordable financing, political and economic stability, and underdeveloped or aging grid infrastructure. Of particular interest in South Africa is the volume of residential energy storage systems being imported.

Can stationary energy storage solve South Africa's power system challenges?

While the potential of stationary energy storage to address the existing power system challenges, are high in South Africa, the current uptake of the technology is limited to customer-sited, behind-the-meter applications (largely for back up services).

Is South Africa ready for energy storage?

The extent to which the South African market is ready for energy storage is considered in subsequent sections. The 2030 vision outlined in the National Development Plan (NDP) of 2011 set the objective to completely eliminate income poverty and reduce inequality in the country.
