

Installing solar panels on photovoltaic panels

Overview

What is a DIY solar panel installation?

DIY installations allow you to customise your solar panel system to match your home's energy needs and roof layout (or perhaps even a balcony). Some professional installations may offer limited options, while a DIY approach allows for optimising panel placement, choosing specific components, and tailoring the system for maximum efficiency.

How do I plan a solar panel installation?

Choose a supplier and establish if the installation will fall under Permitted Development or if full planning permission is required 3. Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5.

How do you install solar panels on a roof?

Align the brackets with the panels' mounting holes using the correct screws and tools for a firm attachment. Double-check each bracket for stability, laying the groundwork for a sturdy installation. Next, install the mounting system on your roof, which usually includes rails to support the solar panels.

What is needed to install solar panels on UK homes?

Here's a quick guide to what's needed to install solar panels on UK homes: An installer should visit to determine if the property is suitable for solar panels. They will look at the size and orientation of the roof to decide the best location and angle for installing panels.

Can a DIY solar panel installation save you money?

Embarking on a DIY solar panel installation can be rewarding, offering significant cost savings and a better understanding of your home's energy systems. We'll help guide you to simplify the process, from initial planning and preparation to the final steps of connecting your system to the grid.

Can you install solar panels on a flat roof?

The DNO is the company responsible for bringing electricity to your home. Usually, your installer will register the device for you. Yes, it's okay to install panels on flat roofs. Solar panels work best when angled towards the sun, so panels on flat roofs are normally tilted up to help maximise energy production.
