

# **Interesting facts about the solar system planets**

## Overview

---

The order of the planets from closest to the Sun outwards is; Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and finally Neptune. The largest planet in the solar system is Jupiter, followed by Saturn, Uranus, Neptune, Earth, Venus, Mars with the smallest being Mercury. The table below shows the size of the planet.

Planets are among the many worlds and smaller objects that orbit the Sun. The formal definition of planet, as voted on by the International Astronomical Union in.

What are some interesting Solar System FACTS?

With so many interesting solar system facts, we've narrowed them down to 25 of our favorites. Our solar system consists of the sun and everything that orbits that sun, like the eight (once nine) planets we all know from elementary school. But the main planets, as diverse and fascinating as they are, are just the beginning.

How many planets are in the Solar System?

The solar system consists of the Sun, planets, dwarf planets, moons, and numerous smaller objects such as comets and asteroids. 194 moons, 3,583 comets and 796,289 asteroids have been found in the solar system. 99.86% of the solar system's mass is found in the Sun. The majority of the remaining 0.14% is contained within the eight planets.

Why are the first 4 planets a terrestrial planet?

The order and arrangement of the planets and other bodies in our solar system is due to the way the solar system formed. Nearest to the Sun, only rocky material could withstand the heat when the solar system was young. For this reason, the first four planets – Mercury, Venus, Earth, and Mars – are terrestrial planets.

Is Earth a planetary system?

Now, we know that the Sun is the center of the solar system and the Earth is

just one of the many planets out there. Our solar system is also just one of the trillions of possible planetary systems too. In the early 1700s, Edmond Halley discovered that comets can make repeated appearances.

How did the Solar System form?

The mass at its centre collected to form the Sun and a flat disk of dust around it. This eventually formed the planets and other bodies of the solar system. The solar system consists of the Sun, planets, dwarf planets, moons, and numerous smaller objects such as comets and asteroids.

Which planets make up 99% of the Solar System?

Together the planets make up 0.14% of the solar systems mass, 99% of which is the gas giants (Jupiter, Saturn, Uranus and Neptune). Except for the Earth, the planets are named after gods from Roman and Greek mythology. The planets size comparison: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune

## Interesting facts about the solar system planets

### Planets Of The Solar System Facts For Kids , Interesting, Fun

The planets of the solar system are grouped into three categories, based on their size and composition: They are gas giants (2), ice giants (2), and terrestrial planets (4 - including Earth). Key Facts & Summary The biggest planets in the Solar System are the

### Solar System Facts: Interesting Facts about Our Solar System

Before we dive right into the detail, here's some bite sized Solar System facts to get us started! It is believed that the solar system formed 4.6 billion years ago from a cloud of gas and dust ...

### The Nine Planets of The Solar System , Eight Planets Without

The Nine Planets is an encyclopedic overview with facts and information about mythology and current scientific knowledge of the planets, moons, and other objects in our solar system and beyond. Eris Eris is the same size as Pluto, but three times further from the

### 24 Facts About the Solar System , Mental Floss

The solar system: It's big, it's heliocentric, and it's got space junk to spare. Here are 24 out-of-this-world facts about the corner of space that's home to Earth.

[25 weird and wild solar system facts . Space](#)

Most notably, we've sent spacecraft to all of the planets in our solar system -- Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune -- as well as two dwarf ...

**Planets For Kids**

We have nine planets in our Solar System. These planets circle around the sun (as I'm sure you know already) this is called orbits. A lot of astronomy people like to think of the Solar System been made up in two parts We have the Inner ...

[92 Interesting Facts About Earth](#)

Interesting facts about earth, the only place in the solar system where water can be present in all the three states - solid The Earth also has the credit of being the densest planet in the Solar System. It has an average density of 5.51 grams per cubic 30.

### 15 Solar System Facts For Kids

The gas planets in the solar system are Jupiter, Saturn, Uranus, and Neptune. The rest of the planets, like Earth, do have a surface to stand on. Those are called rocky planets and are Mercury, Venus, Earth, and Mars. 7. The rocky planets are closer to the Sun

### Interesting Facts About The Planets

Interesting Facts About The Planets. While the universe is a big place to study, we shouldn't forget our own backyard. With eight planets and a wealth of smaller worlds to look

### **50 Interesting Solar System Facts Scientists Have ...**

We've scavenged the vastness of the internet to provide you with some of the most interesting solar system facts you probably have never heard of. So dive into space with these 50 compelling facts about our solar ...

### **Our Sun: Facts**

Our Sun: Facts Our Sun is a 4.5 billion-year-old yellow dwarf star - a hot glowing ball of hydrogen and helium - at the center of our solar system. It's about 93 million miles (150 million kilometers) from Earth and it's our solar system's only star. Without the Sun's

### The Solar System

Saturn is one of the most recognizable planets in our solar system. Even if you've never spotted it through a telescope before, Take a look at these 13 fun facts about the Solar System to answer those questions... 1. There's a fiery moon out there. Jupiter has

### [14 Interesting Facts about The Solar System](#)

Also, smaller solar system bodies have ice like Jupiter's moon Europa, Saturn's moon Enceladus, and the dwarf planet Ceres. 11. Solar System is Bigger Than We Think Beyond Neptune's orbit (the farthest planet), leaving the Solar System takes a long time.

### Planets In Order

Planet Facts - The Planets In Order Our solar system has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. With the exception of Uranus and Neptune, each of these planets can be seen unaided. All eight planets can be see

### Top 20 Interesting Facts About Our Solar System : The

One of these wonders is our very own solar system, a cosmic neighborhood that's home to our planet, Earth. Here, we'll delve into the top 10 interesting facts about our solar system that will leave you in awe of the cosmos. 1. The Sun Accounts for 99.86% of the

### Interesting Facts About The Planets Of Our Solar System

The second biggest planet in our solar system and another gas giant, Saturn is also mostly made up of Hydrogen and Helium. It is famous for its rings which are formed by chunks of rock and ice. It has 62 moons. Saturn takes 10.7 hours to rotate once and 29 years to revolve around the Sun once.

### Facts About Planets (Interesting & Fun)

Our solar system is home to eight fascinating and diverse planets. Each planet has its own unique characteristics and intriguing facts that make them captivating to study. Join us on a journey through the wonders of our celestial neighbors as we explore some interesting and fun facts about the planets in our solar system.

### Planets in Order From the Sun , Pictures, Facts, and

The solar system encompasses planets, moons, asteroids, comets, and dwarf planets, that orbit around the Sun at its center. The solar system was created about 4.6 billion years ago in a collapsing cloud of gas and dust that eventually flattened into a rotating disk.

### 24 Fascinating Facts About the Solar System

Our solar system is a group of celestial bodies in the Milky Way galaxy. At its center is a 4.5 billion-year-old star, a.k.a. our sun, that is orbited by eight planets, over 150 ...

### [Top 10 Facts About Our Solar System](#)

Check out 10 fun facts about our solar system that are sure to amaze you and give you a better understanding of our neighborhood in space. Learn more about our neighborhood in space by clicking through to this neat interactive solar system model that shows the positions of the Sun, planets, and other celestial objects in real-time.

### **Solar System , NASA Space Place - NASA Science for Kids**

Read this article to find out how long it takes all the planets in our solar system to make a trip around the Sun. explore Explore Mars: A Mars Rover Game Drive around the Red Planet and gather information in this fun coding play All About the Moon

### **45 Interesting Facts about Planets and Other Objects in the Solar System**

45 Interesting Facts about Planets for Kids  
Mercury is the second densest planet in the solar system, after Earth, even though it is so small. Sunlight takes about 3.2 minutes to travel from the Sun to Mercury. Mercury is bright and it can be seen from Earth

### **Solar System Facts**

The solar system consists of the Sun, planets, dwarf planets, moons, and numerous smaller objects such as comets and asteroids. 194 moons, 3,583 comets and 796,289 asteroids have been found in the solar system. 99.86% of ...

## Solar System Facts

Our solar system includes the Sun, eight planets, five officially named dwarf planets, and hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky Way, a barred spiral galaxy with two major ...

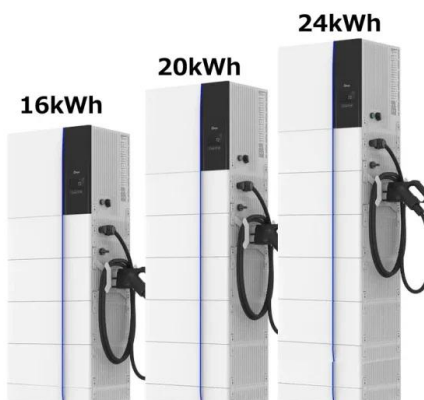

## [100 Fascinating Facts About the Solar System](#)

Let's take a cosmic journey through the solar system and uncover 100 interesting facts you didn't know about our celestial neighborhood. From mesmerizing planets to mysterious phenomena, prepare to be amazed by the wonders beyond Earth.

## 15 Solar System Facts

The Sun Provides Most of Our Solar System's Mass According to solar system facts, 99.86% of our solar system's mass is made of the Sun, which is the only star in our solar system. Planets, dwarf planets, moons and asteroids all orbit around the Sun.

## 10 Interesting Facts About The Planets: Tour of the ...

This article will explore the 10 most interesting facts about the planets that make them so fascinating. Firstly, we will delve into the planet closest to the sun, Mercury. Despite being the most minor planet in our solar system, Mercury has ...

## About the Planets

The solar system has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. There are five officially recognized dwarf planets in our solar system: Ceres, Pluto, Haumea, Makemake, and Eris.

## 100 Interesting Facts about Solar System for Students [with Quiz]

Lesser Known Facts about Solar System Planets  
Our solar system has eight planets and many of them have something special about them. To know all the special things about our planets read below - Mercury is hot. The reason is not known but Venus does

## [The Solar System Facts For Kids](#)

FACT 5. The first four planets nearest the Sun- Mercury, Venus, Earth, and Mars (also called terrestrial planets), lie in the inner solar system. These are made up of rocks and metal. FACT 6. Jupiter, Saturn, Uranus, and Neptune lie in outer solar system. These are

## Solar System Facts: Interesting Facts about Our Solar ...

More Interesting Solar System Facts Over 300 unmanned spacecraft have left Earth to explore the solar system. As of 2021, NASA's Curiosity, InSight, Perseverance, and Ingenuity on Mars are still operational.

## 50+ Sensational Fun Facts about The Solar System for Kids

50+ Wild Fun Facts About the Solar System The Solar System consists of nine major objects. The Sun and eight planets orbiting it. The Sun is the largest thing in the Solar System The Sun consists of 99.8% of the Solar System's mass! Jupiter is the largest
