

# **Is it OK for a photovoltaic inverter to have no fan**

## Overview

---

Inverters need fans to draw in cool air into the inverter component housing and expel the warm air through the device's ventilation ports. Can a 12V inverter support two fans?

It depends on the specific 12V inverter. Some inverters, like the Samlex SSW-1000W, are designed to support two fans. One fan runs continuously, while the other turns on when the load is around 100W or more.

Do inverter fans run continuously?

The fans will run continuously when the AC load on the inverter is at or above 80% of the maximum output rating. Thermally controlled cooling fans are linked to a thermocouple that measures the temperature inside the inverter housing and controls fan speed. They are more expensive but will last longer due to their controlled use.

Do solar inverters need ventilation?

**Adequate Ventilation:** Solar inverters generate heat during operation, and they require proper ventilation to dissipate this heat. Ensure that there is adequate airflow around the inverter to prevent overheating. Installing it in a well-ventilated area or adding a fan if necessary can help maintain a suitable operating temperature.

What should I do if my inverter is not working?

Switch the inverter off and disconnect the battery terminals and the AC loads before brushing off the dust and vacuuming the inverter air intake. Check that the cooling fan blades are clean and that there are no insects or small lizards stuck in the fan blade housing.

Should I replace the cooling fans on my inverter?

If you have eliminated potential causes of noisy cooling fans on your inverter, consider replacing the cooling fans. An inverter has a typical operational

lifespan of ten to fifteen years. Consider having the inverter replaced or an extensive service to replace other components.

Can a solar inverter be used without battery storage?

The answer is yes, if you are connected to the national grid, you can use solar panels and solar inverters without solar battery storage. What is the life expectancy of a solar inverter?

When do you need to replace a solar inverter?
