

# Is it okay to install photovoltaic panels on the river surface

## Overview

---

Can solar panels be installed on water surface?

As mentioned before, the PV panels on the water surface also benefit from the cooling effect of water, reducing the system's operating temperature, preventing overheating of the solar panels, and improving the energy yield (Kamuyu et al., 2018; Suh et al., 2019).

How do PV panels affect water quality?

Large areas of PV panels cast shadows on the water surface and thus can reduce light availability to waterbodies, and floating materials on the water surface reduce contact between the air and waterbody, which may lead to reductions in water temperature and dissolved oxygen 17, 18. These changes might impact aquatic organisms.

Can floating solar power be installed in inland waters?

It is estimated that the total global potential capacity for deploying floating solar power on manmade, inland waters alone could be as high as 4 TW with an expected pipeline of more than 10 GW by 2025. While FPV is a promising growing industry, there are a number of complexities associated with the installation of floating solar plants.

Can solar panels float on bodies of water?

Floatovoltaics — or solar panel installations built to float on bodies of water — are emerging as a useful tool in the world's quest to ramp up renewable energy sources and cut greenhouse gas emissions.

Does water cooling affect PV panels?

The impact of the cooling effect of the water on the PV panel depends on the FPV design and float structures as well as ambient conditions, e.g., wind speed; nevertheless, regardless of the design, the FPVs have a lower temperature compared with the common solar farms (Kamuyu et al., 2018;

Suh et al., 2019).

Do solar panels work better on water?

Traditional solar farms are land intensive and tend to take up more space on a per-watt basis than fossil fuels. There is research suggesting that solar panels may operate more efficiently when buoyed on the surface of water, although researchers note more work needs to be done to conclude whether that's the case.
