

Is it okay to put solar power on the house

Overview

Can solar panels power a house?

While solar panels have the capability to generate enough electricity to power a house, there are a few variables that should be considered before making the jump to running your home completely on solar energy. The design of the house and the roof's surface will impact how many solar panels you will be able to have installed.

Are solar panels right for you & your home?

So, how do you know if they are right for you and your home?

There are many benefits of solar panels. Not only will they generate clean energy, but they will provide energy all year round, and their life span is around 25 years, making them a good investment.

Should you install solar panels at home?

Having solar panels installed at home sounds like an appealing idea. You get free electricity when the sun shines, potentially cutting your energy bills and doing your bit for the environment without having to give it much additional thought.

Do solar panels work if you are not at home?

If you are not at home most days then the solar PV generation will only power the fridge and any other electrical appliances that happen to be running during the daylight hours. The best way to optimise the return on investment from your solar panels is to use all the generation.

Do you own solar panels?

You OWN the solar panels. Under these schemes, you pay for solar panels over a fixed period, say 20 years. There are no upfront costs, and instead you pay a monthly fee, which usually covers the solar panel and battery

installation, repairs and maintenance.

Should you install solar panels again if you move home?

Imagining your house filled with mess from a lengthy installation could be enough to put you off considering solar panels. But few owners complained to us about the installation being disruptive, and 80% said that they'd install solar panels again if they moved home.
