

# **Is it reliable to generate electricity from large solar panels**

## Overview

---

How reliable is solar energy?

Solar energy reliability depends on the quality of the solar panels, inverters, and the overall system design. When switching to solar panels, it's critical to invest in high-quality equipment.

Are solar panels a good investment?

Buying solar panels is a long-term investment that should help cut your electricity bills and carbon footprint. But will they pay for themselves and earn you money?

Solar panels are often marketed as a way to save money on electricity – and sometimes as a way to make money too.

Will solar panels generate enough electricity year-round?

Whether they'll generate enough electricity for your home year-round will depend on: if your solar panel system works in a power cut. It may be more realistic to think about whether you can be self-sufficient for the brighter parts of the year, and then top up your energy use from the grid at other times.

Do solar panels provide a lot of electricity?

Very few found that their solar panels could provide all of their electricity needs. But a quarter of those surveyed told us their panels generated between half and three quarters of their annual electricity. The rest they would get from elsewhere – usually mains grid electricity.

What is solar power & efficiency?

When it comes to solar panels, 'power' refers to the maximum amount of electricity a panel can generate (in watts). The panel's 'efficiency' is all about how effectively it can convert daylight into electricity. Higher power and efficiency mean greater electricity production.

How much electricity does a household solar system provide?

Household solar panel systems are typically up to 4kWp. We spoke to more than 2,000 solar panel owners about the size of their system and how much of their electricity it provides in summer and in winter. Which?
