

Is my roof suitable for solar panels

Overview

Should I install solar panels on my roof?

If you've got between ten and fifteen years left in the life of your roof, you're in good shape to add a solar installation—otherwise, tackle the roof before the panels. Obviously, you need to make sure your roof gets plenty of sun in order to maximize the output of your solar panels.

Is your roof good for solar?

There are plenty of benefits to going solar for homeowners. However, it's not always feasible for everyone. First and foremost – having a roof that can support solar panels is mandatory. So, how can you tell if your roof is good for solar?

This can easily be determined by asking the following four questions: How many solar panels do I need?

.

What is the best roof for solar panels?

Typically, asphalt, metal, tile, tar, and gravel roofs are best for solar panels. The best roof for solar will also typically face south, be pitched at a 30-degree angle, and have at least 480 square feet of space. Check out the EnergySage Marketplace to compare quotes for solar energy systems from our network of pre-vetted installers.

How do I choose a roof for solar?

It's important to have a large enough roof to fit the amount of solar panels you need. Traditional asphalt and metal roofs are the best materials for solar projects. Solar installations are riskier on tile or wooden roofs. If you do not have a roof suitable for solar, alternatives to roof solar include ground-mounted and community solar.

Can a wooden roof be used for solar panels?

Wooden roof types can include shingles at an angle or may be completely flat, so the specifics will be dependent on the way the roof is structured. In any case, a wooden roof is not viable for solar panels because of fire safety concerns. Therefore, wood is not the best material for solar panels.

Is wood a good material for solar panels?

Therefore, wood is not the best material for solar panels. Rooftop solar equipment and installers have come a long way in recent years and most roof materials are suitable for solar panels. With that said, the best roof material is anything that will keep your solar panels secure for their 25-warrantied life or longer.
