Overview

Solar windows look very much like ordinary glass windows but they also generate solar power. Can solar glass turn windows into power generating panels?

Solar Glass, also known as "Solar Windows", is a solution that can turn windows into power-generating panels. What is Solar Glass?

.

Can windows be used to generate solar power?

If you picture the glittering glass skyscrapers that dot America's cities, it becomes clear why the idea of using that vast window space to generate solar power is gaining traction. In 2009 alone, 437 million square feet of windows were installed in non-residential buildings in the United States.

Could solar windows be the future of energy?

Solar windows and related transparent solar technologies could provide around 40% of energy demand in the United States, the MSU team believes. Combined with rooftop solar units, this could rise to almost 100%. There's so much glass in the world, the potential is huge.

Can solar glass generate electricity from the Sun?

Solar Glass can generate the same energy as 1/5 of a solar panel without impacting the transparency of its glass. Although this technology is not yet widely available and is still in its early stages, Solar Glass seems like a very promising new way to generate electricity from the sun.

Can solar windows save energy?

In Europe, a Netherlands-based company called Physee is installing 15,000 'SmartWindows' in office buildings throughout Europe. These windows incorporate solar power cells but also have sensors that manage building

energy use. Physee estimates that these windows will cut building energy costs by up to 30%. How do solar windows work?

.

What do solar windows look like?

Solar windows look like regular glass windows, but act like solar panels, generating electricity from the sun. Transparent solar panels were pioneered at Michigan State University and are now being installed commercially. The US alone is estimated to have between five and seven billion square metres of glass surface.
