## Overview

---

Spare (uninstalled) lithium ion and lithium metal batteries, including power banks and cell phone battery charging cases, must be carried in carry-on baggage only. With airline approval, passengers may also carry up to two spare larger lithium ion batteries (101–160 Wh) or lithium metal batteries (2-8 grams). Are lithium ion batteries allowed in check-in luggage?

Lithium ion batteries must not be placed in check-in luggage and should be carried in carry-on baggage. However, batteries with a capacity of more than 160Wh are not permitted in carry-on baggage.

Can you take a lithium ion battery on a plane?

Spare lithium batteries must be carried in carry-on baggage only and must be individually protected so as to prevent short circuits. Power banks are considered as spare lithium batteries and must be completely switched off in flight. Lithium ion batteries: the Watt-hour rating must not exceed 100 Wh.

Should airport check-in & carry-on baggage contain lithium battery power banks?

Operators should ensure that airport check-in and passenger services staff and cabin crew are made aware of the potential for items of checked and carry-on baggage to contain lithium battery power banks and tracking devices such as GPS / GSM.

Can I use Spare lithium batteries inside the cabin?

While spare lithium batteries, including portable battery chargers and power banks are permitted for use inside the cabin, it is strictly prohibited to recharge them using the in-seat power outlet or USB port at any time due to potential safety hazards. Please pack spare lithium batteries in your carry on luggage, following the guidelines above.

What is the lithium battery regulation for China domestic flight?

With more and more digital products which are equipped with lithium batteries, the lithium battery regulation for China domestic flight is listed as following: 1. It is prohibited to put lithium batteries in checked baggage 2.

Can a battery be carried on a plane?

Note: Specific security regulations may prevent the carriage of some peripherals, spare batteries and power banks in carry-on baggage. for lithium metal or lithium alloy batteries, a lithium content exceeding 2 g, but not exceeding 8 g. Only permitted in portable medical electronic devices,

### **TSA's Important Guidelines To Bring A Flashlight Through Airport Security**

The Federal Aviation Administration requires devices containing lithium metal or lithium ion batteries to be kept in carry-on luggage, rather than placed in a checked bag. This rule is in place because the batteries have the potential to

overheat or short-circuit, which could cause them to smoke or even explode in the plane's baggage hold compartment.

### GRADE A BATTERY

LiFePO4 battery will not burn when overcharged, over discharged, overcurrent or short circuit and can withstand high temperatures without decomposition.

### Pack It Right For Your Flight

Unknown to passengers, many household items and consumer products (eg. powerbanks and lithium batteries) are classified as dangerous goods. When such items are carried by passengers on board an aircraft in their checked or carry-on baggage, they can become a threat to the safety of passengers and crew.
