Overview

What is the importance of quality control in battery production?

Authors to whom correspondence should be addressed. Lithium-ion batteries are a key technology for electromobility; thus, quality control in cell production is a central aspect for the success of electric vehicles. The detection of defects and poor insulation behavior of the separator is essential for high-quality batteries.

Do lithium-ion batteries need quality control tests?

Lithium-ion batteries must undergo a series of quality control tests before being approved for sale. In this study, quality control tests were carried out on two types of lithium-ion pouch batteries, here denoted as type A (with stacked electrode configuration) and type B (with a jelly-roll arrangement) to assess the effectiveness of the tests.

What is Quality Management in lithium ion battery production?

Quality management for complex process chains Due to the complexity of the production chain for lithium-ion battery production, classical tools of quality management in production, such as statistical process control (SPC), process capability indices and design of experiments (DoE) soon reach their limits of applicability .

What are lithium-ion batteries used for?

The use of lithium-ion batteries (LIBs) increases across applications of automobiles, stationary energy storage, consumer electronics, medical devices, aviation, and automated infrastructure, 1 - 6 assuring the battery quality becomes increasingly essential.

How to evaluate a lithium-ion battery quality?

Discrepancies existed for the cathode material. For cell B, the NMC material specified by the battery manufacturer turned out to be LCO. From this analysis

it can be concluded that lithium-ion battery quality evaluation should incorporate electrochemical performance tests and assessments of assembly precision and material composition.

Are quality management tools limiting the production chain of lithium-ion cells?

It has been shown that current quality management tools easily face their limits when applied to the production chain of lithium-ion cells due to its complexity and the need for real time processing of collected data.
