

Lithium iron batteries

Overview

The lithium iron phosphate battery (LiFePO₄ battery) or LFP battery (lithium ferrophosphate) is a type of lithium-ion battery using lithium iron phosphate (LiFePO₄) as the cathode material, and a graphitic carbon electrode with a metallic backing as the anode. Because of their low cost, high safety, low toxicity, long.

LiFePO₄ is a natural mineral of the family (olivine) and first identified the polyanion class of cathode materials for (M. S. Whittingham, 1980).

The LFP battery uses a lithium-ion-derived chemistry and shares many advantages and disadvantages with other lithium-ion battery chemistries. However, there are significant differences. Resource availability Iron and phosphates are abundant.
