

Live moon right now

Overview

Today's rise, transit and set times of The Moon from Greenwich, UK(all times relative to the local timezone Europe/London): If you need to access this information frequently for you.

The distance of The Moon from Earth is currently 406,136.0 kilometers, equivalent to 0.0027148515 Astronomical Units. Light takes 1.355sto travel from The Moon and arrive to us. The.

Between 1 January 1600 and 30 December 2499, the closest approach of The Moon to Earth happens on Wed Jan 13 2275 at a distance of 0.002382 Astronomical Units, or 356,377 kilomete.

The following chart is the predicted light curve (visual magnitude as a function of time) of The Moon, according to the most recent ephemeridesdata. Magnitude data is sampled with a.

The Moon tonight is in Waning Crescent phase in the constellation of Virgo, at a distance of 406,136.0 kilometers from Earth. The current Right Ascension is 12h 27m 23s and the Declination is -03° 50' 48" (apparent coordinates). The magnitude of The Moon is -6.64 (data provided by JPL Horizons). This image accurately.

Today's rise, transit and set times of The Moon from Greenwich, UK(all times relative to the local timezone Europe/London): If you need to access this information frequently for.

The distance of The Moon from Earth is currently 406,136.0 kilometers, equivalent to 0.0027148515 Astronomical Units. Light takes 1.355sto travel from The Moon and arrive to us. The following.

The following chart is the predicted light curve (visual magnitude as a function of time) of The Moon, according to the most recent ephemeridesdata. Magnitude data is sampled with a 2 days interval and there might be inaccuracies for objects changing brightness very rapidly.

Between 1 January 1600 and 30 December 2499, the closest approach of The Moon to Earth happens on Wed Jan 13 2275 at a distance of 0.002382 Astronomical Units, or.

Where is the Moon from Greenwich?

Today's rise, transit and set times of The Moon from Greenwich, UK (all times relative to the local timezone Europe/London): Moon is above the horizon from Greenwich, UK. Right now it is placed in the South-East direction at an altitude of 3.51 ° above the horizon.

How long does it take the Moon to orbit the Earth?

It takes 29.53 days for the Moon to orbit the Earth and go through the lunar cycle of all 8 Moon phases. There are 8 lunar phases the Moon goes through in its 29.53 days lunar cycle. The 4 major Moon phases are Full Moon, New Moon, First Quarter and Last Quarter.

How do I view the moon's phase in 2024?

This visualization shows the Moon's phase at hourly intervals throughout 2024, as viewed from the Northern Hemisphere. Change this and other settings in "Your View" menu at any time. This Moon map highlights up to three recommended sites that you can observe today, based on the lunar phase and your view mode.

What is NASA's interactive map for observing the Moon?

NASA's interactive map for observing the Moon each day of the year. **WHAT WILL YOU SEE?**

This shows the Moon's current phase in two ways: the percentage of the Moon's nearside that is illuminated by the Sun, and how many days have passed since new moon.

Is the full moon a good time to observe the Moon?

The Full Moon is the most exciting phase to observe with the naked eye. It's bright and large and can sometimes appear in unusual colors. However, the Full Moon is not the best phase for close observations because the sunlight falls directly on our natural satellite, leaving no shadows and contrast.

How do I get a full moon calendar?

If you want to have a full-fledged Moon Calendar in your pocket, download the free Sky Tonight app. It will tell you today's Moon phase, exact moonrise and moonset times for your location, show the Moon's current position in your sky,

and much more. Just tap the calendar icon and open the “Moon” tab. What are the Moon phases?
