Overview

What does Lockheed Martin do?

Lockheed Martin has been awarded a contract to build the first megawatt-scale, long-duration energy storage system for the U.S. Department of Defense. Help optimize the human-machine team for our customers. Work in a tech-enabled, intelligent and flexible environment.

Where is Lockheed Martin building a new battery?

Fort Carson, an Army facility south of Colorado Springs, Colorado, is set to get a very large new battery. Lockheed Martin has been awarded a contract to build the first megawatt-scale, long-duration energy storage system for the U.S. Department of Defense. Help optimize the human-machine team for our customers.

Why did Lockheed Martin develop gridstar® flow?

For over 86 years, Lockheed Martin has invested in resilient, smart and safe energy technologies. As the clean energy evolution continues, the current dominant technologies cannot provide the durable, flexible and distributed energy storage required to sustain power for extended durations. That's why we developed GridStar® Flow.

What did Lockheed Martin do before s/n01?

Prior to S/N01, Lockheed Martin installed and operated two precommercial GridStar Flow prototypes. Key learnings from those systems were incorporated into the final S/N01 design, which will form the basis for commercial systems for customer-sited projects.

Where is the energy storage system being built and tested?

The energy storage system will be built and tested at the new Andover facility in the coming months. Sean Powers, a manufacturing engineer, and Sanya Ramjattan, a test engineer lead, are familiar with the advantages of a

consolidated location while developing advanced energy storage solutions.

What is long-duration energy storage?

Long-duration energy storage is a crucial component for making renewable energy sources like wind and solar more practical. Long-duration energy storage is a method for storing energy over extended periods of time to make up for the intermittent nature of these energy sources. It's not always sunny or windy, but people use energy all the time.
