

Mci solar

Overview

What does MCI stand for?

The Tesla Mid-Circuit Interrupter (MCI) is used within PV strings and arrays to meet the Rapid Shutdown requirements of NEC Article 690.12. For information on how the Tesla MCI functions with Tesla Solar Inverter as a Photovoltaic Rapid Shutdown System (PVRSS), see Appendix E: Solar Inverter Rapid Shutdown.

Do I need an MCI for a solar panel installation?

MCIs are not required if the installation is not required to comply with Rapid Shutdown requirements (NEC 690.12). Where it is allowable to install only (1) MCI per string, MCI-1 must be used. For flat plate solar panel installations, ensure the MCIs do not directly contact the roof.

What is MC Solar?

Whether a project is a new development or a residential solar installation, we provide our clients with long-term renewable solutions that immediately reduce their energy costs. Our dedication to excellence has driven MC Solar since its inception, to the high quality of workmanship we continue to deliver today.

What is a Tesla MCI?

The Tesla MCI is also referred to as the Tesla Solar Shutdown Device. There are two models of Tesla MCI, MCI-1 and MCI-2. Both perform the same function, but they have unique specifications (see Specifications) and installation methods (outlined in the following installation instructions). Figure 1. MCI-1 (left) and MCI-2 (right).

Who is CMI solar?

Solar energy demands are growing at an unprecedented rate and CMI Solar was created to address those needs. CMI Group has been a leader in the

transportation and logistics industry for over 25 years.

What is mc-Si solar cell?

Multi-crystalline silicon (mc-Si) solar cell occupies a significant fraction in the global photovoltaic market because of its low manufacturing cost at the industrial production level. In a literature review, Green 1 mentioned that the untreated silicon surface had a large reflection for the incident light.
