

Microfilm Master of State Grid

Overview

The first microform type that can be found in collections is microfilms. Microfilm is a roll or spool of film with sequential frames of images. These film reels look similar to rolls of movie films.

The second type of microform is microfiche. Microfiche are small (10-by-15-cm) flat sheets of plastic with a series of microimages in a grid-like shape. A standard sheet can store.

Aperture cards are pieces of cardstock that have a single frame of 35mm film mounted into an aperture hole. There are two general formats for aperture cards: Hollerith and Standard. Hollerith aperture cards are similar to the old.

Where can I find microfilms from industry?

The ESA Archives holds some microfilms from industry in its Envisat technical documentation and master microfilm files, along with microfiches of ESA final contract reports and official blue-docs - you can see some examples in the slideshow below. We also have a microfiche reader that was capable of converting them into pdf files.

Where can I find information about microfilm preservation?

Microfilm and Microfiche Preservation Leaflet - General microfilm preservation care and handling information from NEDCC. RLG Archives Microfilming Manual (PDF) - Best practices for microfilming archival materials. Storage and Preservation of Microfilms (PDF) - In-depth guide from the company formerly known as Eastman-Kodak.

What type of microform does not have a film base?

Microforms that do not have a film base are primarily microforms on a reflective rather than transparent base. Examples of such microforms include microopaques, also known as microcards or microprints.

What is the difference between microfiche and microfilm?

Let's start by clearing this one up with some definitions: both microfiche and

microfilm are types of microform, storing photographic images of documentation too small to be visible to the human eye. The difference is in their format.

What are the RLG guidelines for microfilming to support digitization?

RLG Guidelines for Microfilming to Support Digitization and IFLA's Microfilming for Digitisation and Optical Character Recognition discuss the creation of microfilm to support future digitization efforts. Guidelines for environmental storage of media. Guidelines for environmental storage of acetate film.

Is polyester based microfilm a low preservation risk?

Polyester-based microfilm is a low preservation risk. The paper card on which the microfilm is mounted will deteriorate differently depending on the type of paper used. Common Size(s) 7 $\frac{3}{8}$ " \times 3 $\frac{1}{4}$ " card containing one frame of a 35mm microfilm or several frames of a 16mm film. Background
