

Microgrid Black Start Technology

Overview

The process of restoring an electric power station or a part of an electric grid to operation without relying on the external electric power transmission network to recover from a total or partial . When is a black start procedure necessary for microgrids?

A black start procedure for microgrids is indispensable when the contingencies cause a long time full blackouts. For overhead systems, such contingencies include: trees are blown into power lines, hurricanes or winter storms blow down the poles.

Do microgrids have a black start strategy?

Accordingly, this study proposes a novel black start strategy for microgrids to determine the restoration sequence and optimally allocate the DERs after full blackouts.

What is a black start power system?

The black start of power systems should rely on cranking power from black start sources such as hydropower stations and microgrids [2]. A microgrid is a low or medium voltage distribution system comprised of distributed energy resources (DERs) and loads that operate either in grid-connected or islanded mode.

What is black-start service?

NREL is investigating options for black-start service, which is important to the safe, reliable, and resilient operation of electric power systems and a critical part of system restoration for power grids. Black start is the ability of generation to restart parts of the power system to recover from a blackout.

How do microgrids work?

For example, a diesel generator may be started with a local battery. This is used to create an AC voltage waveform that other generation can synchronize

to and start to generate additional power. Microgrids can provide local reliability and resilience through local generation.

What is a black start?

Black start is the ability of generation to restart parts of the power system to recover from a blackout. This entails isolated power stations being started individually and gradually reconnected to one another to form an interconnected system again. It is used when the grid experiences a blackout and must be restarted from scratch.
