

Microgrid Economic Simulation Software

Overview

What is Homer microgrid software?

HOMER microgrid software provides the detailed rigor of chronological simulation and optimization in a model that is relatively simple and easy to use. It is adaptable to a wide variety of projects. For a village or community-scale power system, HOMER can model both the technical and economic factors involved in the project.

What is a solar microgrid?

The microgrid consists of a behind-the-meter (BTM) solar photovoltaic (PV) system, a battery energy storage system (BESS), a combined heat and power (CHP) generator, and standby diesel generators. We modeled this microgrid by leveraging the ETAP software and performed power system studies for both grid-connected and islanded modes of operation.

What is a simplified microgrid design interface?

The simplified interface removes the complexities of microgrid design and guides users through the design process with built-in checklists and tools to allow rapid and seamless collaboration between customers, developers, financiers, and regulators, regardless of prior experience with microgrids.

How do I start modeling microgrids?

Finally, if you are most interested in the easiest way to start modeling microgrids, REopt is your go-to. The free programs may require some back-end programming to accurately model everything that HOMER and XENDEE come pre-programmed to handle, but the user interface for REopt is the most intuitive of all the platforms.

Which microgrid software should I Choose?

If price is your main concern, especially if you are just starting out with microgrid services, NREL's SAM and REopt, and EPRI's DER-VET are free and

open-source software with the confidence of NREL's expertise behind them.

What reports are available in microgrid software?

Some of the available reports in the microgrid softwares mentioned above include system resiliency studies, energy arbitrage modeling, peak-shaving or load-response analyses, probability-of-exceedance analysis (P50/P90), and reliability/coverage probability reports.
