

Midamerican energy solar program

Overview

Utility-scale solar energy has become an essential part of our efforts to generate energy with net-zero greenhouse gas emissions for our customers. MidAmerican's current solar projects consist of 141 megawatts of renewable generation capacity, adding to our nearly 7,700 megawatts of wind capacity. What is MidAmerican Energy doing in Iowa?

MidAmerican Energy has announced plans for a US\$3.9 billion renewable energy project in Iowa, US, including wind and solar generation, and the exploration of new technologies to advance the company's transition to net-zero greenhouse gas emissions.

Should MidAmerican Energy spend \$3.9 billion on wind & solar energy?

State regulators approved MidAmerican Energy's proposal to spend \$3.9 billion to build more capacity to generate wind and solar energy, but added conditions that environmentalists say better protect consumers and require more analysis on the utility's clean-energy transition.

When will MidAmerican Energy complete construction?

If approved, the company plans to complete construction in late 2024. MidAmerican Energy has announced plans for a US\$3.9 billion renewable energy project in Iowa, US, including wind and solar generation.

Can I Sell my Land to MidAmerican to house solar projects?

And, if you're interested in selling your land to MidAmerican to house solar projects, please fill out our online interest form . MidAmerican Energy continues to explore ways to diversify energy production while keeping prices affordable for our customers, including small- and utility-scaled solar projects.

How many megawatts can MidAmerican power?

MidAmerican, the power company owned by Warren Buffett's Berkshire Hathaway, says it can build nearly 2,100 megawatts of wind and solar energy

generation at "no net cost to consumers."

What will MidAmerican's wind prime project entail?

In a filing with the Iowa Utilities Board, MidAmerican's proposed project, called Wind PRIME, would add 2042 MW of wind generation and 50 MW of solar generation. The company also proposed conducting feasibility studies focused on other clean generation technologies, including carbon capture, energy storage, and small modular nuclear reactors.
