

NMC battery storage EPC turnkey quotation per 100MW 2030

Overview

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2022). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

Why should you choose Edina as your battery energy storage EPC contractor?

Why Edina as your Battery Energy Storage EPC Contractor?

We are a BESS turnkey EPC contractor and systems integrator of advanced global Tier 1 battery and inverter technologies to provide an industry-leading battery energy storage solution that is scalable and delivers guaranteed performance.

Are battery cost declines based on electric vehicle pack projections?

Battery cost declines are based on electric vehicle battery pack cost projections with adjustments for stationary racks. The gap between electric vehicle packs and stationary racks is assumed to decrease over time as stationary energy storage grows in manufacturing scale.

What is a turnkey Engineering Procurement & Construction (EPC) cost assessment?

This assessment focuses on turnkey engineering procurement, construction (EPC) installed costs, fixed maintenance (or maintenance service agreement) costs. Data and input was collected from EPRI projects, publicly-available and fee-based analyses², and surveys of vendors, integrators, analysts, consultants, and service providers.

Are EPC costs fixed or fixed?

Fixed Costs: Engineering, general expenses, and mobilization have fixed costs with some scaling with size. Therefore, EPC costs for smaller system are a higher percentage of the total cost than larger systems. Lithium ion installed costs are projected to decrease by over 40% by 2030.
