

National solar power subsidies suspended

Overview

Should the UK reduce subsidies for solar panels?

The first is the overarching aim of policy; the latter is just one of the ways of reaching it. The decision by the UK government to reduce the subsidies it provides to those installing solar panels helps to clarify an important distinction. As such, it is a step which should be encouraged.

Do subsidies affect people's willingness to install solar panels?

Analysis of data from the past 15 years shows that subsidies do have a significant impact on people's willingness to install solar panels. Introduced when the Labour Party was last in power in 2010, the Feed-in Tariff (FIT) scheme aimed to encourage the uptake of solar by paying homeowners for the electricity they generated.

Does solar need a subsidy?

Solar no longer needs subsidy and is now the cheapest form of power. For many households, accessing the capital required for installation remains a problem. Therefore, the Government should consider consulting on how it can facilitate affordable loans for households. Further, EAC recognises the benefit of installing a battery alongside solar PV.

Are early renewable subsidies paying off?

"It marks a turning point in the UK's net-zero transition as it becomes clear that early renewable subsidies are paying off," says Jess Ralston at the Energy and Climate Intelligence Unit think tank. "It's a significant milestone," says Josh Buckland at the consultancy Flint Global.

Will a UK government back solar?

Signs of a UK government that's prepared to back solar have emerged within a fortnight of the Labour Party securing victory in the General Election. The government has already signed off on more than 1 GW of new solar capacity.

It's been a whirlwind two weeks for the UK solar industry.

Does the new UK government want solar energy to grow?

Chris Hewett, chief executive of Solar Energy UK, told pv magazine he believes the new UK government “unambiguously” wants the industry to grow, a first for the trade association. “It’s central to their economic strategy,” said Hewett, “There is no path to their growth strategy that doesn’t go through the clean energy transition.”
