Alloy: 6061 6063 6082 6060 6005 6463 [click to check the Alloy Performance Parameter Table] Product type:aluminum profile, aluminum sheet, aluminum strip, aluminum flat bar, etc. Deep processing:drilling, bending, welding, precision cutting, punching, etc. Surface treatment:mill finish, powder coating, anodizing.

Extruded aluminum profiles are usually used for solar panel frames and solar mounting system, because aluminum extrusions have high.

The cooling speed of aluminum is fast compared to the traditional materials, which has a significant advantage in solar PV system because the increase of PV cell temperature will reduce the power generation efficiency. And.

Aluminum has become a feasible solution in the energy field due to its properties of light weight, efficient installation capacity and low price. In addition.

In solar energy, Transformers convert and regulate electrical energy from photovoltaic systems, ensuring efficient operation and grid connectivity. Their design directly impacts solar system efficiency and reliability.
