

Nuclear solar power station

Overview

What is hybrid nuclear-solar power plant?

The hybrid nuclear-solar power plant is compared with standalone solar tower plant. For comparison purposes, both plants generate the same amount of solar electricity. Both configurations have identical solar islands regarding structure and parameters as described in Section 2.3.

How does nuclear energy work?

Nuclear energy pairs perfectly with renewables such as wind and solar to create a reliable, clean energy system. It provides carbon-free, around-the-clock power to fill the gaps when the sun isn't shining or the wind isn't blowing.

What is hybrid nuclear-solar tower power plant (NSPP)?

2.3. Configuration of hybrid nuclear-solar tower power plant (NSPP) The proposed hybrid plant consists of four main parts: solar field, thermal storage, NuScale SMR and power block. Fig. 4 shows the assumed hybrid plant configuration.

Does Holtec have a solar power plant?

Holtec International has announced a new power plant design which combines the benefits of nuclear with those of solar. The Combined Nuclear/Solar Plant features the company's SMR-300 small modular reactor, its HI-THERM HSP solar thermal system, together with its Green Boiler energy storage system.

How does a nuclear plant work?

In terms of nuclear energy generation, the majority of the plant configuration includes a reactor system and a steam system where the reactor acts as primary and steam as a secondary system. These configurations are used to keep radioactive atoms and materials in the primary system.

Which energy sources are used in hybrid nuclear energy systems?

While the energy is generated through renewable sources, the system usually includes a photovoltaic system, batteries, diesel generators, wind turbines (Senjyu et al., 2007). In addition, there are other renewable sources of energy that are used in hybrid nuclear energy systems, such as hydroelectric, biomass, marine technologies, and geothermal.
