## Overview

What is a Nissan e-NV200?

The Nissan e-NV200 is a small electric van that has proven so successful for Nissan that it's elected to continue producing it in 2021 even though the regular diesel NV200 has been replaced completely.

Is the e-NV200 a diesel or electric van?

Concern over range limitations is less relevant when longer journeys are less frequent. Like its diesel-engined sibling, the e-NV200 is available with a van body, as a five-seat combi van, or as the five or seven-seat e-NV200 Evalia people carrier. The e-NV200 comes in just one size, with a 107bhp electric motor.

Is the Nissan NV200 a good electric van?

The NV200 van it is based on dates all the way back to 2009, and while it was clearly superior to token rivals that have come and gone, the electric van sector is about to explode and there are many new competitors on the way that are promising to make life a little harder for this electric Nissan.

Is the e-NV200 a good car?

And while the market for electric vehicles was still relatively immature back then, the e-NV200 has found itself a role in the best and biggest blue chip fleets in the years since. The first models were fitted with a 24kWh battery pack, providing a realistic real-world range of less than 60 miles.

What is the e-NV200 XL?

Developed by Slovakian firm Voltia but assembled in the UK by truck-body conversion specialists the Bevan Group, the e-NV200 XL adds a high roof and extended tail to the basic van body, creating up to 8.0 cubic metres of load space - which is more room than most medium vans.

How long does the Nissan e-NV200 battery last?

As with all new Nissan vans, the e-NV200 comes with a five-year warranty as standard – although in the electric van’s case this is limited to just 60,000 miles. The battery pack is covered for eight years or 100,000 miles, though, which acts as a guarantee that it will still power-up nine out of the 12 battery capacity markers over all that time.

- Efficient Higher Revenue**
  - Max. Efficiency 97.3%
  - Max. PV Input Voltage 600V
  - 100% Peak Output Power
  - 3 MPPT Trackers, 150% DC Input Overloading
  - Max. PV Input Current 15A, Compatible with High Power Modules
- Intelligent Simple O&M**
  - IP65 Protection Degree, support outdoor installation
  - Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
  - DC & AC Type II SPD, prevent lightning damage
  - Battery Reverse Connection Protection
- Flexible Abundant Configuration**
  - Plug & Play, EPC Switching Under 30ms
  - Compatible with Lead acid and Lithium Batteries
  - Max. Current Inverter Breakable
  - AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
