Why is President Obama promoting solar energy?

President Obama is committed to ensuring that every American family can choose to go solar and cut their energy bills.

What was Obama's energy policy?

The energy policy of the Obama administration was defined by an "all-of-the-above" approach which offered federal support for renewable energy deployment, increased domestic oil and gas extraction, and export of crude oil and natural gas.

What is Obama's energy security plan?

In a speech on March 31, 2010 at Andrews Air Force Base, President Obama outlined a new energy security plan. The president's plan includes initiatives such as raising fuel efficiency standards.

How many MW of solar power will the new commitments bring?

Today's new commitments represent \$287 million in investment and nearly 280 MW of solar power. They bring the total amount of commitments secured to more than \$800 million in investment and over 491 MW of solar power.

How does the Clean Power Plan work?

The Clean Power Plan sets standards to reduce CO2 emissions by 32% from 2005 levels by 2030, which is 9% more than the proposed rules previously set forth by the Obama administration. How?

It sets carbon pollution reduction goals for power plants and requires states to implement plans to meet goals.

Is this big solar project a Hoover Dam project?

AGUA CALIENTE: This big solar project in Arizona is just one of the large clean power plants enabled by the Energy Department's Loan Program Office. Credit: Courtesy of NRG A blue-black field of 5.2 million solar panels tilted toward the Arizona sun might just be the Hoover Dam project of the Great Recession.
