

Off-grid photovoltaic panel wiring diagram

Overview

There are number of choices that you have to make when installing a DIY off grid solar system that affects how you wire the system together. In particular, you will need to decide: 1. The number of panels and voltage of your solar panel array 2. Your overall system voltage, based on battery bank size and your energy needs .

When you are wiring solar panels, you have three choices on how you wire the system — 1. Series solar panels — plus to minus, plus to minus 2. Parallel solar panels — Plus to plus, minus to minus 3. Mixed — strings of series.

Battery banks should be wired to match your system voltage, which is the voltage allowed by your DC appliances or AC inverter. Typical DC appliances made for RVs run off 12V or 24V, although there are some 48V variants out.
