

On grid solar storage EPC turnkey quotation per 500MW 2025

Overview

What are EPC costs based on a contracting approach?

1. Costs based on EPC contracting approach. Direct costs include equipment, material, and labor to construct the civil/structural, mechanical, and electrical/I&C components of the facility. Indirect costs include engineering, construction management, start-up, and commissioning. EPC fees are applied to the sum of direct and indirect costs. 2.

What is a DC-coupled solar inverter?

CASE DESCRIPTION This case is based on a nominal 150 MWAC solar photovoltaic (PV) plant with 200 MWh of lithium-ion battery storage that is DC-coupled. The DC-coupling architecture refers to a design in which the PV and battery components are coupled on DC side (plant side) of the inverter.

What type of inverter does a PV system use?

This system uses one 2500-kW central inverter with one integrated 2.5 MVA medium-voltage transformer within each PV block. Inverters that are skidded with a medium-voltage transformer (either via internal or external integration) are referred to as power conversion stations and are typically sold as a cohesive unit from the inverter manufacturer.
