

# One thousand acres of land for solar power generation

## Overview

---

To supply 1000 homes with solar (1 GWh of electricity a year), NREL finds that about 2.8 acres are needed for solar panels, whether they be concentrating or solar PV. Here's how NREL describes it: How much land does a solar farm need?

Generally, a solar farm requires around 25 acres of land for every 5 megawatts of installation capacity. Not all of this land will be usable for a project. So, developers tend to seek around 200 acres for a commercial-scale project to be on the safe side. A minimum of 10 acres is considered the industry standard for smaller projects (around 1MW).

How many homes can a solar farm power?

It's the third largest solar farm in the world, with a capacity of 2.7 gigawatts (GW). To put that into perspective, a single gigawatt has the potential to power anywhere between 200,000 to 1,000,000 homes, depending of course on how much energy each home uses.

How much does a solar farm cost?

The cost of a solar farm can vary from around £500,000 for small community farms, to over £50 million for large scale solar farms. The total cost depends first on the obvious factor: the size of the solar farm. It costs £8,000 to £10,000 to buy one acre of land in the UK.

Which is the largest solar farm in the world?

It boasts six of the world's 15 biggest solar farms in the world and has a total solar capacity of 2,919GW. The Xinjiang Solar Farm – with a capacity of 5GW – is the world's largest solar farm, followed by Golmud Solar Park – also in China – in second and India's Bhadla Solar Park in 3rd.

How much land does solar energy occupy?

A novel method is developed within an integrated assessment model which

links socioeconomic, energy, land and climate systems. At 25–80% penetration in the electricity mix of those regions by 2050, we find that solar energy may occupy 0.5–5% of total land.

Can solar farms be built on flat land?

As with most wind power projects, developers only place solar farms on land that meets certain conditions. The land should be sturdy for solar projects and not fall foul to sinking from soft soil. But it's also essential to consider the landscape for a site, as solar projects are particularly reliant on flat land without steep slopes.
