

# **Opening direction of the inclined beam of the photovoltaic bracket**

## Overview

---

Which angle should a solar photovoltaic module be mounted?

However, to follow the classic theory of solar photovoltaic orientation, the module must be mounted facing south with an optimal tilt angle between  $11.48^\circ$  to  $16.8^\circ$ . In May and September, it is preferable to tilt the modules horizontally as all five modules with different tilt and orientation angles produced negative GRI values.

Should solar PV modules have specific orientation and tilt angles?

The study will also allow solar PV module manufacturers to incorporate specific orientation and tilt angles into their user manuals with corresponding maximum values of incident solar radiation and optimal tilt angles for semiconductor silicon photovoltaic technology.

Should photovoltaic systems be installed at the optimum tilt angle?

Decreasing the tilt angle, we increase up to 24% the amount of obtained energy. A professional point of view suggests that photovoltaic systems should be installed at the optimum tilt angle and orientation. However, in photovoltaic systems integrated in buildings the flexibility of installation is common.

Does tilt angle affect photovoltaic energy collection?

The effect of tilt angle and air pollution on the amount energy collected by a photovoltaic module was investigated by Asl-Soleimani [ 24] for Tehran, Iran. They found a  $30^\circ$  tilt angle to be the optimum, which is about  $5^\circ$  less than the latitude of the city.

Which tilt angle should a PV system be installed with?

Generally, it is recommended that a PV system should be installed with a tilt angle which is equal to the latitude of the site [ 2, 7 ]. Models have been proposed by several authors for the determination of the best (optimum) tilt

angles.

Which direction do photovoltaic solar modules face?

1. Two of the photovoltaic modules were facing north tilted at  $5.5^\circ$  and  $10.1^\circ$  angles based on Lagos latitude ( $6.7^\circ$ ) as a general guide. It was intended to guide and provide information on some authors' general rule that photovoltaic solar modules located in the northern hemisphere must be oriented towards the equator (south). 2.
