

# Ordinary light can generate electricity from solar energy

## Overview

---

How can we use sunlight to generate electricity?

And there is another way to use this abundant energy source: photovoltaic (photo = light, voltaic = electricity formed through chemical reaction) solar cells, which allow us to convert sunlight directly into electricity.

How do solar panels generate electricity?

Solar cells transfer light energy from the Sun into electrical energy directly. When sunlight hits layers of silicon inside solar cells, an electric charge builds up, creating a flow of electricity. Because solar panels rely on sunlight, they only generate electricity during the daytime when sunlight is shining on them.

How do solar cells convert light into electricity?

Solar cells, also known as photovoltaic cells, convert light energy directly into electrical energy. They are made primarily from semiconductor materials, with silicon being the most common. When sunlight strikes the surface of a solar cell, it excites electrons in the semiconductor material, creating an electric current.

Can a PV cell convert artificial light into electricity?

Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy. These photons contain varying amounts of energy that correspond to the different wavelengths of the solar spectrum. A PV cell is made of semiconductor material.

Do solar panels generate electricity at night?

Solar panels generate no electricity at night time. Solar panels can't store energy, so you have to use the electricity they generate when the sun is shining. You need batteries to store the energy generated. These are expensive. - Solar cells convert the light from the sun into electricity.

## How does solar work?

The amount of sunlight that strikes the earth's surface in an hour and a half is enough to handle the entire world's energy consumption for a full year. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation.
