Are solar PV projects implementing energy storage capacity in Chile?

Operational solar PV projects in Chile are implementing energy storage capacity, with AES Andes reaching COD of a solar-plus-storage project this week. Image: AES Andes.

Why is solar PV a problem in Chile?

Image: AES Andes. Solar PV in Chile is facing a twofold issue: on the one hand, the ever-increasing curtailment of generation; on the other, the reduction of income due to low prices of electricity with increasing zero marginal cost.

Does a hybrid CSP + PV plant work in Chile?

Chile presents a combination of favorable climatic conditions which result in the highest levels of solar irradiation in the world. In this paper, the performance of a hybrid CSP + PV plant at utility-scale integrated with a large-scale Battery Energy Storage System (BESS) located in northern Chile was studied.

Can solar power power a Bess plant in Chile?

Both technologies will go hand in hand in Chile, as solar PV is seen as the primary generation source to charge BESS plants, explains Juan Pablo Toledo, country manager, Chile at Metlen Energy & Metals.

What is the best tracking assembly system for PV plants in Chile?

The analysis performed in this work was based on a hybrid plant with a fixed-tilt PV power plant, since the PV market trend of Chile does not show any consensus on which is the most suitable tracking assembly system for PV plants (45.7% of the Chilean PV capacity has a fixed-tilt configuration, followed by 44.4% with one-axis-tracking system).

How many PV power plants are in Chile?

According to Zurita et al. (2018), total PV capacity including operational and under-testing PV power plants of Chile for January of 2018 was about 2244 MW of which 45.7% has a fixed-tilt configuration, followed by 44.4% with one-axis-tracking system, and 3.1% with two-axis tracking.
