## Overview

---

In the geocentric model, the planets and the revolve around Earth. In the heliocentric model, Earth and the planets.

The full moon is on the opposite side of Earth from the sun. The full Venus is in almost the same direction as the sun. The apparent size of the moon does not change with its phases. The new moon is between Earth and the su.

The Core The Radiation Zone The Convection Zone II. The Sun's Atmosphere The Photosphere The Chromosphere The Corona Solar Wind III. Features on the Sun Sunspots Prominences Solar Flares nuclear fusion Hy.

Astronomers inferred that the sun rotates because sunspots move in one direction over time. The sun rotates from west to east. Sunspots at points A and B take longer move around the sun than does a sunspot the equa.

Earth is unique in our solar system in having liquid water at its surface. Mercury has a greater temperature range than any of the other planets. A day on Venus is longer than its year. The reddish tinge on Mars is due to th.

In the geocentric model, the planets and the revolve around Earth. In the heliocentric model, Earth and the planets revolve around the sun. In Ptolemy's model, the planets moved on circles that moved on bigger circles. Galileo observed moons orbiting around ter.

Chromosphere Photosphere Core Corona Sunspots Prominence f h b d c j a g e k i .

The full moon is on the opposite side of Earth from the sun. The full Venus is in almost the same direction as the sun. The apparent size of the moon.

The Core The Radiation Zone The Convection Zone II. The Sun's Atmosphere The Photosphere The Chromosphere The Corona Solar Wind III. Features on the Sun.

What are the layers of a solar system?

The layers in order are the photosphere, the chromosphere, and the corona.

You see the photosphere. You can identify it as a reddish glow visible just around the photosphere. The moon blocks light from the photo-sphere, so the corona becomes visible. solar wind a. Sunspots b. Prominences c. Solar flares a c b Auroras, or magnetic storms.

Which planets are in a R ystem test?

r ystem Test Interpreti g Tables 1. Mercury 2. Jupiter 3 E rth 4. Th y do n t ave ring . 5. Saturn 6. Uranus7. Venus 8. Jupiter, Saturn, Uranus, Ne 8. 19. d 20. bWritten Response21. Electrica ly charged particles from the Sunrain down on Earth, they strike atoms and molecules in the upper tmo.

How did Ptolemy's heliocentric model explain Earth's orbit?

In Ptolemy's model, the planets moved on small circles that moved on bigger circles. Galileo observed moons orbiting around Jupi-ter. This showed that not everything revolves around Earth. He also observed phases of Venus that are similar to those of Earth's moon. The heliocentric model could easily explain these observations.
