

# Photovoltaic all-wheel drive tracking bracket

## Overview

---

What is solar tracking system slew drive?

Solar tracking system slew drive is an important component that enables solar panels to track the path of the sun to obtain maximum solar energy collection efficiency. Solar tracking systems can be dual-axis tracking (tracking in both horizontal and vertical directions) or single-axis tracking (usually horizontal tracking).

What is a VE series solar tracking system?

VE series: VE series is usually used in solar tracking systems. It may include slewing drives of varying specifications and capabilities to meet the needs of various solar tracking systems. Slew Drive: This is the key component in a solar tracking system, it is responsible for rotating the solar panel.

Why should you choose cone drive for your solar tracker drive?

The lab includes capability to run a wide variety of tests including load testing for evaluating reducer performance and operating efficiency. Cone Drive has a long history of developing custom solutions for both single-axis and dual-axis solar tracker drives.

Why should you choose a global solar drive manufacturer?

As a global solar drive manufacturer we have the experience and the reach to deliver highly effective solar solutions. The rapid expansion of the Ka-band technology has driven the need for precision motion control tracking capabilities for Satellite + Antennae positioning systems.

How accurate is solar tracking?

Solar tracking systems can be dual-axis tracking (tracking in both horizontal and vertical directions) or single-axis tracking (usually horizontal tracking). Dual-axis tracking provides more precise tracking, but is generally more complex. Accuracy options are available: Level I, Level II, Level III, and

conventional accuracy.
