

Photovoltaic bracket cement pier pre-embedded diagram

Overview

How is a ground mounted PV solar panel Foundation designed?

This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole.

What is a photovoltaic module?

A photovoltaic (PV) module is a packaged, and connected photovoltaic solar cells assembled in an array of various sizes. Photovoltaic modules constitute the photovoltaic array of a photovoltaic system that generates and supplies solar electricity in commercial and residential applications.

How big is a concrete pier?

Reference spMats Engineering Software Program Manual v8.50, StructurePoint LLC., 2016 Design Data Concrete Pier Size = 3.0 ft Diameter Height = 4.0 ft Concrete Footing Size = 10.0 ft x 10.0 ft $f'c' = 4,000$ psi $f_y = 60,000$ psi Thickness = 24 in. Clear Cover = 3 in.

Why are slaved nodes assigned to a concrete pier?

Slaved nodes are assigned to restrain the rotation about the axis where the moment is applied for the nodes under the concrete pier to simulate the stiffness of the pier above the foundation and to prevent any stress concentrations due to applying the axial load and moments as point loads.
