

Overview

How will global PV manufacturing capacity change in 2022?

In 2022, global PV manufacturing capacity increased by more than 70% to nearly 450 GW, with China accounting for more than 95% of new additions across the supply chain. In 2023 and 2024, global PV manufacturing capacity is expected to double, with China again accounting for more than 90% of the increase.

Will global solar PV manufacturing capacity double next year?

Global solar PV manufacturing capacity is set to nearly double next year, reaching almost 1 TW, according to the IEA. This expansion would be sufficient to meet the agency's annual net zero demand for 2050, which anticipates PV deployment of nearly 650 GW in 2030 and almost 310 GW in 2024.

What does integrated PV mean?

“Integrated” indicates three or more manufacturing processes in one single plant. The budget for India’s PLI scheme was announced in February 2022, with project capacities for the second phase awarded in March 2023. Announced solar PV manufacturing capacity by region and component, 2022-2023 - Chart and data by the International Energy Agency.

How much does photovoltaics contribute to the world's electricity demand?

In total, PV contribution amounts to over 8% of the electricity demand in the world. Public policies with regards to photovoltaics tend to change as governments seek to promote solar or react to changing costs to investors or even state aid programs.

How much solar power does the EU produce?

The production volume of electricity from solar photovoltaic power in the European Union has been steadily increasing in the last years. In 2023, the EU's solar PV power production stood at over 240 terawatt hours.

How big is China's solar PV capacity in 2022?

China's installed capacity of solar PV has grown at a compound annual growth rate (CAGR) of more than 65%, reaching 427GW in 2022. Image: Trina Solar
