Overview

How big is the solar photovoltaic (PV) market?

The market is expected to grow from USD 399.44 billion in 2024 to USD 2,517.99 billion by 2032 at a CAGR of 25.88% over the forecast period (2024-2032). Asia Pacific dominated the solar photovoltaic (PV) market with a market share of 49.16% in 2023. Solar energy is used to convert sunlight into electricity by using photovoltaic effect technology.

What is the global solar photovoltaic (PV) market share?

Geographically, the global solar photovoltaic (PV) market share is divided into North America, Europe, Asia Pacific, the Middle East & Africa, and Latin America. The Asia Pacific region held the major share of the global market. More than 77 GW of solar capacity will be added in the region in 2020.

What is solar's price to earnings ratio?

The price to earnings ratio is calculated by taking the latest closing price and dividing it by the most recent earnings per share (EPS) number. The PE ratio is a simple way to assess whether a stock is over or under valued and is the most widely used valuation measure. First Solar PE ratio as of March 31, 2023 is 0.00.

Why is the solar photovoltaic market growing?

The government in many countries has imposed stringent carbon emission norms due to which the focus towards the renewable sector is increasing, particularly towards solar photovoltaic generation. This is expected to push this market towards growth during the forecast period. Request a Free sample to learn more about this report.

What is a snapshot of global PV markets?

This 11th edition of the "Snapshot of Global PV Markets" aims at providing preliminary information on how the PV market developed in 2022. The 28th

edition of the PVPS complete “Trends in Photovoltaic Applications” report will be published in Q4 2023.

How big is the global PV market?

After a year of market stabilization, preliminary reported market data shows a global annual PV market at a slightly higher level than 2018 and 2017. At least 114,9 GW of PV systems have been installed and commissioned in the world last year. The total cumulative installed capacity for PV at the end of 2019 reached at least 627 GW.
