## Overview

---

Are all PV products covered by IEC61730 'photovoltaic (PV) module safety qualification'?

In future it is expected that all PV products will increasingly be covered by International standard IEC61730: 2004 'Photovoltaic (PV) module safety qualification'.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:.

Who should check the roof structure of a solar PV system?

5.9.4 The MCS Contractor shall ensure that the roof structure is checked by a suitably competent person to ensure it can withstand the loads imposed by the solar PV system. 5.9.5 For the typical roof structure types shown in Table 1, the calculation methodologies given should be used. qualified structural engineer shall be consulted.

How should a PV system be designed & installed?

From the outset, the designer and installer of a PV system must consider the potential hazards carefully, and systematically devise methods to minimise the risks. This will include both mitigating potential hazards present during and after the installation phase.

What is the inspection and testing of PV array circuits?

The inspection and testing of d.c. circuits, particularly testing PV array circuits requires special considerations. Appendix C covers the inspection and testing of PV array circuits and documentation to be provided. PV array/string performance tests are recommended to verify performance as a check for faulty modules.
