

# **Photovoltaic bracket project cost analysis**

## Overview

---

What is NREL's PV cost benchmarking work?

NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up approach.

How much does a solar PV system cost?

The average cost of BOS and installation for PV systems is in the range of USD 1.6 to USD 1.85/W, depending on whether the PV system is ground-mounted or rooftop, and whether it has a tracking system (Bony, 2010 and Photon, 2011). The LCOE of PV systems is therefore highly dependent on BOS and installation costs, which include:

How much LCOE does a PV system cost?

The LCOE of current utility-scale thin-film PV systems was estimated to be between USD 0.26 and USD 0.59/kWh in 2011 for thin-film systems. Despite the large LCOE range, PV is often already competitive with residential tariffs in regions with good solar resources, low PV system costs and high electricity tariffs for residential consumers.

Where are solar PV cost data taken?

Data are taken from the Microgeneration Certification Scheme - MCS Installation Database. For enquiries concerning this table email [fitstatistics@energysecurity.gov.uk](mailto:fitstatistics@energysecurity.gov.uk). Small scale solar PV cost data for 2023-2024 published. Small scale solar PV cost data for 2022-2023 published. Small scale solar PV cost data for 2021-2022 published.

What is solar technology cost analysis?

NREL's solar technology cost analysis examines the technology costs and

supply chain issues for solar photovoltaic (PV) technologies. This work informs research and development by identifying drivers of cost and competitiveness for solar technologies.

What are the technical risks associated with PV projects?

Our works have highlighted that technical risks exist across all PV project phases, from as early as the project is conceived to when the system is in its operational year. If not managed properly, these could affect the CAPEX, OPEX or yield of the PV system and thus impact the PV levelized cost of electricity.
