

# Photovoltaic double-row bracket

## Overview

---

What are solar panel mounting brackets made of?

Most of the components of solar panel roof mounting brackets are made of aluminum or steel, which has a good performance of high corrosion resistance. The clamp is constructed from high tensile strength aluminum. It features a design that allows for either single or double bolt tightening, saving installation time and making it easy to construct.

What are the different types of PV mounts?

Specialized in researching and developing, manufacturing, selling solar energy products. Roof mounts are the more common category of PV mounts, suitable for direct installation on rooftops or separate racking frameworks. The type and size of the roof dictate the use of different mounting systems, which encompass clamps, ballasts, or rail systems.

What are the components of a solar panel mounting structure?

The components of the mounting structure comprise slotted rails, end and mid clamps, rubber gaskets, as well as nuts and bolts. Ready to discuss your solar project?
