

# Photovoltaic insulation board installation requirements

LPSB48V400H  
48V or 51.2V

## Overview

---

If you wish to avoid the need for planning permission, the panels must:  
Not be installed above the highest point of the property (not including chimneys)  
Be fitted in a way that least affects the external appearance of the property and the surrounding area  
Not protrude more than 200mm from the surface of your roof  
Do solar panels comply with building regulations?

Your solar panel system must comply with building regulations in terms of structural integrity, electrical safety and fire safety. These regulations may vary depending on the size and type of the installation. It's advisable to work with accredited installers who are familiar with these requirements.

What are the requirements for a PV installation?

Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work. There are two routes to comply with the requirements of Part P:  
Notify the relevant Building Control department before starting the work.

Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

Do I need a building regulations approval for a PV system?

Building Regulations approval may require the product to have passed the wind uplift, water penetration and spread of flame tests (see section 2.1.1.2). These will usually be applicable only where the PV is integrated into the fabric of the building.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there

is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:.

Can a solar panel be installed on a roof?

If you wish to install a solar panel on your roof building regulations will normally apply. The ability of the existing roof to carry the load (weight) of the panel will need to be checked and proven. Some strengthening work may be needed. Building regulations also apply to other aspects of the work such as electrical installation.

## Photovoltaic insulation board installation requirements

### What Are the Roof Insulation Building Regs in the UK (2024)

In existing pitched roofs, insulating roof rafters by adding extra insulation layers meets the updated U-values. Flat roofs: Given their higher thermal efficiencies, to meet the ...

### Technical specifications for solar PV installations

o IEC 61730: Photovoltaic (PV) module safety qualification  
o IEC 61277: Terrestrial photovoltaic (PV) power generating systems - General and guide. B. Concentrating  
o IEC 62108: ...
